

Fall 2019

Stanford Center for Professional Development
AA 274A: Principles of Robot Autonomy I

Instructor:

Prof. Marco Pavone

Office: Durand 261

Email: pavone@stanford.edu

Course Assistants:

Andrew Bylard

Email: bylard@stanford.edu

Boris Ivanovic

Email: borisi@stanford.edu

Jenna Lee

Email: yunjlee@stanford.edu

Toki Migimatsu

Email: takatoki@stanford.edu

Apoorva Sharma

Email: apoorva@stanford.edu

Location and time: NVIDIA Auditorium, Tuesday and Thursday, 10:30am – 11:50am; Friday 1:30pm - 2:50pm. Friday lectures are optional for those enrolled in AA 174A. For all others, the homework will require material taught during the Friday lectures.

Sections:

- Monday, Wednesday, 10:30am – 12:30pm, Skilling Lab space.
- Monday, 3:00pm – 5:00pm, Skilling Lab space.
- Tuesday, 4:00pm – 6:00pm, Skilling Lab space.
- Thursday, 2:00pm – 4:00pm, Skilling Lab space.

Office Hours:

Prof. Pavone: Tuesdays, 1:00 – 3:00pm (Durand 261), after class, and by appointment.

Course assistants: Tuesdays, 2:00 – 4:00pm, and Thursdays, 4:00 – 6:00pm, in Durand 023.

Units: 3 or 4. Taking this class for 4 units entails additionally completing a paper review at the end of the quarter, with details to be announced later.

Prerequisites:

- Familiarity with programming (e.g., CS 106A or equivalent). Previous experience with Python would be helpful, but is not required.
- College calculus, linear algebra (e.g., CME 100 or equivalent).
- Basic probability and statistics (e.g., CME 106 or equivalent).

Course websites:

- For course-related questions: pi Piazza.com/stanford/fall2019/aa174aaa274acs237aee260a
- For homework submissions: <https://www.gradescope.com/courses/59890>
- For lecture videos: <https://canvas.stanford.edu/courses/105756>
- For urgent questions: aa274a-aut1920-staff@lists.stanford.edu

Textbooks: There is no required textbook. Recommended reading material:

- R. Siegwart, I. R. Nourbakhsh, D. Scaramuzza. *Introduction to Autonomous Mobile Robots*. MIT Press, 2nd Edition, 2011, ISBN-10: 0262015358. Price: \$66.90.
- S. Thrun, W. Burgard, D. Fox. *Probabilistic Robotics*. MIT Press, 2005, ISBN-10: 0262201623. Price: \$64.59.
- S. M. LaValle. *Planning Algorithms*. Cambridge University Press, 2006, ISBN-10: 0521862051. Price: \$79.29. Free electronic version available at <http://planning.cs.uiuc.edu/>

Additional ROS reading material:

- P. Goebel. *ROS By Example*. 2013, ISBN: 9781365690136. Price: \$37.95.
- M. Quigley, B. Gerkey, W. D. Smart. *Programming Robots with ROS: A Practical Introduction to the Robot Operating System*. O'Reilly Media. 1st Edition, 2015, ISBN-10: 1449323898. Price: \$38.14.
- J. M. O'Kane. *A Gentle Introduction to ROS*. 2013, ISBN-10: 1492143235. Price: \$12.50. Free electronic version available at <https://cse.sc.edu/~jokane/agitr/>.
- L. Joseph, J. Cacace *Mastering ROS for Robotics Programming*. 2nd Edition, 2015, ISBN-10: 1788478959. Price: \$49.99. eBook available at <https://www.packtpub.com/hardware-and-creative/mastering-ros-robotics-programming-second-edition>

Course Content: Basic principles for endowing mobile autonomous robots with planning, perception, and decision-making capabilities. Algorithmic approaches for trajectory optimization; robot motion planning; robot perception, localization, and simultaneous localization and mapping (SLAM); state machines; introduction to methodologies for reasoning under uncertainty, e.g., (partially observable) Markov decision processes. Extensive use of the Robot Operating System (ROS) for demonstrations and hands-on activities.

Course Goals: To learn the *theoretical*, *algorithmic*, and *implementation* aspects of main techniques for robot autonomy, in particular modeling & controls, motion planning, perception, localization & SLAM, state machines, and decision making. To learn how to apply such techniques in applications and research work by leveraging the Robot Operating System (ROS). With this class, the student will:

- Gain a fundamental knowledge of the “autonomy stack” behind self-driving cars, drones, and mobile autonomous robots in general;
- Be able to apply such knowledge in applications and research work by using ROS;
- Devise novel methods and algorithms for robot autonomy.

Course Structure and Homework Policy: The class comprises four modules, roughly of equal length, namely:

1. motion control and planning (09/24 – 10/11);
2. robotic perception (10/15 – 10/25);
3. localization and SLAM (10/29 – 11/15);
4. state machines, decision making, and system architecture (11/19 – 12/05).

There will be a total of **four** problem sets. Rules:

- Because of the multiple topics that will be pursued in the course, it is important to keep up with the assignments. To account for unforeseen extraordinary circumstances, students are given a total of 6 free late days that may be used for the homeworks; a maximum of 3 late days will be allowed on a given assignment.
- Cooperation is allowed in doing the homework. You are encouraged to discuss approaches to solving homework problems with your classmates, however **you must always prepare the solutions on your own**. You **must** write on your problem set the names of the classmates you worked with. Copying solutions, in whole or in part, from other students or any other source will be considered a case of **academic dishonesty**. This includes posting code online or using posted code online from previous iterations of the course.

- **Homework submissions must be typeset** (e.g., in L^AT_EX or Word.)

Sections: In addition to lectures, students are expected to sign up for a 2 hour section time that they will attend once per week. These sections will provide a chance for students to work on hands-on exercises that complement the lecture material and develop skills necessary for the final project. Part of your grade will come from attending, participating in, and completing tasks in your section each week. You must sign up for a section time using the link posted on the course website by 9/29/19. These sign ups are first-come first-serve.

SCPD Students: Sections are not filmed, SCPD students are expected to participate via video conference.

Participation on Piazza: Piazza will be the main tool for class discussion. A student will get an extra point each time he/she (1) asks a question about lecture material; (2) answers a question about lecture material; or (3) answers a question about homework. Questions or answers should be endorsed by one of the CAs in order to receive credit. A student can accrue a maximum of five extra points. Additional details will be provided in a pinned note on Piazza.

Final Project: For the final project, students will be assigned the task of deploying the autonomy stack incrementally built through the problem sets on a TurtleBot robot, with the ultimate goal of enabling self-driving capabilities in a mock urban environment. This task will involve combining *all* the skills the students have learnt from the class. More details about the final project will be given during the week of November 5, 2019.

SCPD Students: SCPD students will have two options for the final project:

1. If local, SCPD students may simply come to Stanford and work on the hardware platform in the same way non-SCPD students do.
2. If not local, the final project will be replaced by a final exam, and the autonomy stack incrementally built throughout the quarter will only be tested in simulation (namely, Gazebo).

Course Grade Calculation:

- (15%) midterm I.
- (15%) midterm II.
- (15%) final project.
- (40%) homework.

- (15%) sections.
- (extra 5%) participation on Piazza.

Schedule: subject to some slippage

★ lectures for AA 274A / CS 237A / EE 260A only (optional for AA 174A)

Date	Topic	Assignment
09/24	Course overview, mobile robot kinematics	
09/26	Introduction to the Robot Operating System (ROS)	
09/27	★ Autonomy in the wild (seminar)	HW1 out
10/01	Trajectory optimization	
10/03	Trajectory tracking & closed loop control	
10/04	★ Advanced methods for trajectory optimization	
10/08	Motion planning I: graph search methods	HW1 due, HW2 out
10/10	Motion planning II: sampling-based methods	
10/11	Midterm I	
10/15	Robotic sensors & introduction to computer vision	
10/17	Camera models & camera calibration	
10/18	★ Stereo vision	HW2 due, HW3 out
10/22	Image processing, feature detection & description	
10/24	Information extraction & classic visual recognition	
10/25	★ Modern robotic perception	
10/29	Intro to localization & filtering theory	
10/31	Parameteric filtering (KF, EKF, UKF)	
11/01	★ Nonparameteric filtering (PF)	
11/05	EKF localization	HW3 due, HW4 out, Final project released
11/07	EKF SLAM	
11/08	★ Monte Carlo localization and particle filter SLAM	
11/12	Multi-sensor perception & sensor fusion	
11/14	Software for autonomous systems I	
11/15	★ Software for autonomous systems II	
11/19	State machines	HW4 due
11/21	Decision making under uncertainty	
11/22	Midterm II	Final project check-in
11/26	Thanksgiving Recess (no classes)	
11/28	Thanksgiving Recess (no classes)	
11/29	Thanksgiving Recess (no classes)	
12/03	Reinforcement learning	
12/05	Conclusions	
12/06	Final Project	

Students with Documented Disabilities: Students who may need an academic accommodation based on the impact of a disability must initiate the request with the Office of Accessible Education (OAE). Professional staff will evaluate the request with required documentation, recommend reasonable accommodations, and prepare an Accommodation Letter for faculty dated in the current quarter in which the request is made. Students should contact the OAE as soon as possible since timely notice is needed to coordinate accommodations. The OAE is located at 563 Salvatierra Walk (phone: 723-1066, URL: <http://studentaffairs.stanford.edu/oea>).

Lecture Recordings: Video cameras located in the back of the room will record all lectures for this course, including Friday lectures. For your convenience, you can access these recordings by logging into the course Canvas site. These recordings might be reused in other Stanford courses, viewed by other Stanford students, faculty, or staff, or used for other education and research purposes. Note that while the cameras are positioned with the intention of recording only the instructor, occasionally a part of your image or voice might be incidentally captured. If you have questions, please contact a member of the teaching team.
