

Principles of Robot Autonomy I

Section 8: Open section

Aims

- Get acquainted with the final project
 - Feel free to sit together with members of your group
- Get time with the robots
 - Work on whatever you want to

Final Project TODOs

1. Check out the projects page on the course website, it's now been populated with information.
2. Check out the homework page, we've uploaded a final project check-in document meant to get you started, due Nov. 22nd (this Friday!)
3. Nominate one person from your group to have Skilling door access, this is how you'll be getting access without the TAs around.
 - Send Boris (borisi@stanford.edu) that person's Full Name and SUID.

Section 8 & Onwards

- Section time will be open sessions to work on the robot, with the help of TAs around.
- You may go to other sections if you prefer, **but people in that section have first priority.**
 - If you have a groupmate there, your group is counted as a normal part of that section.
- We will get out a list of times Skilling is free later on, including the environment in the back room.
